

# Powerlease

Long-term UPS leasing

Secure your power supply while preserving your budget and peace of mind with **Powerlease**.

The **Powerlease** Long-Term UPS Leasing formula enables you to rent a latest-generation UPS system, without upfront costs, for a period of 5 to 6 years, while benefiting from a services offer adapted to your needs.

## Budget under control

The leasing payments amount is defined at the time of subscription, for the entire duration of the contract. It includes both rental of the UPS system and the maintenance contract for planned budgeting with no surprises. And the bonus point? The subscription involves no upfront costs!

## Preserved cash flow

Expenses related to the UPS rental can be accounted as rental expenses in the income statement.

Preference is given to operating expenses (OPEX), so you can focus investments (CAPEX) on the company's strategic activities.

## Serenity and simplicity

A single point of contact, Socomec, takes care of all the steps for you: from ordering the equipment to its commissioning, including the financing file. Inspection visits are also planned by us, for optimal peace of mind.

## Flexibility

The Powerlease contract is flexible from start to finish.

- At the time of subscription: UPS system, battery type, options, and level of maintenance contract can be customised.
- During the contract: if requirements change, the UPS system can be modified after 12 months by simply contacting Socomec.
- At the end of the contract: you can choose to extend with or without an options update, renew with a new UPS system, or close by returning the equipment.

## Key points

- > Leasing period of 5 to 6 years, renewable.
- > Latest-generation UPS.
- > No upfront costs and fixed leasing payments.
- > Fully configurable and scalable contract after 12 months.

## Advantages

- > Budget under control.
- > Retained investment capacity and cash flow optimisation.
- > Peace of mind.
- > Flexibility.
